DECISION

MPA/167349

PRELIMINARY RECITALS

Pursuant to a petition filed July 19, 2015, under Wis. Stat. § 49.45(5), and Wis. Admin. Code § HA 3.03(1), to review a decision by the Division of Health Care Access and Accountability (DHCAA) in regard to Medical Assistance (MA), a telephonic hearing was held on August 18, 2015. At petitioner's request the record was held open for 42 days to allow her time to submit any additional documentation to support her appeal. Nothing was received in that timeframe.

The issue for determination is whether the petitioner is entitled to MA reimbursement for a panniculectomy.

There appeared at that time and place the following persons:

FINDINGS OF FACT

1. Petitioner (CARES # [REDACTED]) is a resident of Waukesha County.

2. On or about May 20, 2015 the petitioner's provider, [REDACTED], submitted a Prior Authorization (PA) request to the DHCAA on the petitioner's behalf requesting MA reimbursement for a panniculectomy.
3. On or about June 2, 2015 the DHCAA returned the PA to [REDACTED] requesting that he provide clinical documentation to verify that petitioner met the criteria for approval of a panniculectomy. Nothing was provided to the DHCAA.
4. On July 1, 2015 the DHCAA issued a notice to petitioner denying the PA request because there was no evidence to show that the guidelines for approving the panniculectomy were met.

DISCUSSION

Surgeries for the removal of excess skin require prior authorization. Wis. Admin. Code, §DHS 107.06(2)(zf). When prior authorization is requested, the DHCAA reviews the request to determine whether the surgery is medically necessary. Wis. Admin. Code, §DHS 107.02(3)(e). It is the provider's responsibility to justify the need for the service. Wis. Admin. Code, §DHS 107.02(3)(d)6.

The DHCAA's approval criteria for such a surgery are as follows:

Panniculectomy surgery is considered medically necessary if the panniculus hangs below the level of the pubis **and** either one of the following criteria is met:

- The medical record documents that the panniculus causes chronic intertrigo that is refractory to at least three months of appropriate medical therapy or consistently recurs over three months while receiving appropriate medical therapy.
- There is a presence of a significant functional deficit that prohibits or profoundly impairs the ability to perform activities of daily living due to a significant physical deformity or disfigurement resulting from the excess skin folds, and surgery is expected to restore or greatly improve the functional deficit. Examples of this would be deficits that prohibit a member from being able to properly shower or toilet.

...

Note: If the procedure is being performed following significant weight loss, in addition to meeting the PA criteria, there should be evidence documented in the member's medical records that the individual has maintained a stable weight for at least six months. If the weight loss is the result of bariatric surgery, panniculectomy should not be performed until at least 18 months after bariatric surgery and only when weight has been stable for at least the most recent six months.

See Forward Health Update 2014-01 at <https://www.forwardhealth.wi.gov/kw/pdf/2014-01.pdf>

The problem with petitioner's PA request is that the provider did not document any of the foregoing criteria. Rather, he identified significant risk for petitioner if she were to have this surgery. Based on the information submitted with the PA request, I must concur with the denial.

Petitioner's provider can always file another PA request with better documentation.

CONCLUSIONS OF LAW

The DHCAA correctly denied a request for a panniculectomy because there was insufficient documentation to show it was medically necessary.

THEREFORE, it is

ORDERED

The petition for review herein is dismissed.
